

Installing the AI Assistant in ManufacturerManager

Download Ollama from

<https://ollama.com/download/windows>

and install it.

Open a Powershell instance and check that it is installed using

```
ollama --version
```

Assuming that you have Ollama installed you can now install some LLMs. I am using

```
tinyllama
```

```
phi3:mini
```

```
qwen2.5:3b
```

as my 3b models. In your Powershell instance run the following commands:

```
ollama pull tinyllama
```

```
ollama pull phi3:mini
```

```
ollama pull qwen2.5:3b
```

Optionally you can run the following commands for some larger models

```
ollama pull qwen2.5:7b
```

```
ollama pull llama3.1:8b
```

```
ollama pull phi3:medium
```

Simply install these and ManufacturerManager's RAG AI help system will work!
