Installing the AI Assistant in ManufacturerManager

Download Ollama from

https://ollama.com/download/windows

and install it.

Open a Powershell instance and check that it is installed using

ollama --version (that's dash dash version)

Assuming that you have Ollama installed you can now install some LLMs. I am using

tinyllama
gemma3:1b
qwen2.5:3b

as my smaller models. In your Powershell instance run the following commands:

ollama pull tinyllama
ollama pull gemm3:1b
ollama pull qwen2.5:3b

Optionally you can run the following commands for some larger models

ollama pull qwen2.5:7b
ollama pull llama3.1:8b
ollama pull gemma2:9b

Simply install these and ManufacturerManager's RAG AI help system will work!
